CHRISTIE+

VeinViewer® does more than locate veins. It empowers you to improve the patient experience.

Clinical data shows VeinViewer is the superior vein finder that can help you improve the total patient experience by reducing the number of stick attempts.

VeinViewer technology allows you to clearly see more venipuncture sites. With VeinViewer, peripheral veins up to 10mm deep are evident as well as problematic valves and bifurcations.

VeinViewer displays accurate vein width, enabling you to select the correct catheter gauge every time.

Seeing more veins allows for more venous access options. You're empowered to make the best choice for insertion, avoiding potential complications and patient discomfort.

Make the first stick the only stick with VeinViewer.

PATIENT
SATISFACTION**

More informed vascular access choices for a better experience.

- ✓ Easily locate and avoid valves and bifurcations to help reduce complications
- ✓ Visualize fluid flushing and detect hematomas as they form
- ✓ Accurate display of vein width for correct catheter gauge selection
- ✓ Faster IV placement
- ✓ First stick success means on-time therapy delivery
- ✓ Avoid higher acuity "rescue" central lines
